

## **Hay Communications Brings 8 Gigabit Internet Speeds to Rural Southwestern Ontario**

SW Ontario – July 23, 2024 – Hay Communications is marking the milestone launch of cutting-edge 8 Gbps internet service and its first subscriber at these speeds. This groundbreaking service reaffirms our commitment to delivering top-tier connectivity to areas traditionally underserved by major telecommunications companies.

Our new gigabit packages offer unparalleled speeds. This will allow businesses to expand without the need to relocate and ensure homes have sufficient bandwidth for any new trends. Adopting new technologies will no longer be hindered by connection speeds. Whether it's virtual reality, video conferencing, online gaming, or remote education and work, our service ensures a seamless and reliable experience. "We are being proactive in addressing the present and future connectivity needs of our customers." Angela Lawrence, General Manager at Hay Communications.

Over the past 20 years, our expanding fibre network has laid the groundwork for this achievement. "Our network technicians have been working on this project for the last year upgrading fibre optic equipment and the core fibre network to the broader world wide web. We can now feel great about our first 8 gig customer added and this monumental accomplishment." said Lawrence.

This latest development signifies a major leap forward, ensuring that Hay Communications remains at the forefront of connectivity solutions for years to come. Recently surpassing 10,000 customers is a testament to Hay's dedication to providing high-quality internet services in Southwestern Ontario, standing strong against the competition from the largest telecommunication companies.

For details on our 8 Gbps service and to explore upgrade options, visit [hay.net](http://hay.net).
